Mumbai, January 2006

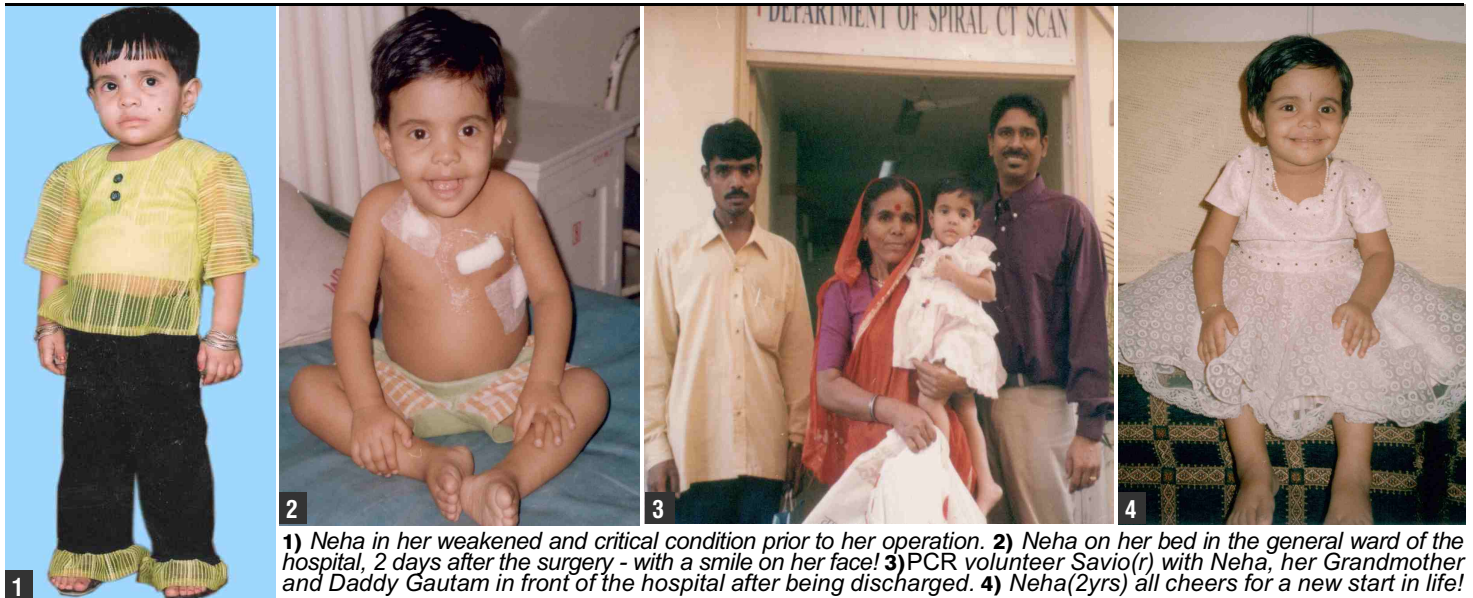

Report: Heart Surgery of Ms. Neha Ingile

Until the birth of her 3rd child, Varsha our maid, was doing the daily cleaning in our house. Her daughter Neha had been quite weak since birth. Only recently her condition became critical, when she begun to suffer from acute shortness of breath. Thorough checkups revealed that she was born with a cardiac defect, known as PDA (Patene Ductus Arteriosus). The medical report read: *In PDA patients the bad de-oxygenated blood and the good oxygenated blood is mixed up, causing severe shortness of breath. It is required that the shunt tube be disconnected to separate the good blood from the bad blood. This surgery should be performed in such children before the age of two.*

Neha already past the age of two, required immediate surgery. **Polio Child Relief-Mumbai** consulted a renown heart specialist in Mumbai, who performed the difficult operation at a reduced cost. Just three days after the surgery Neha was discharged. She is recovering well and feels more energetic by the day. Her family is very thankful for the help and we rejoice with them, that Neha can start a new life! We at PCR-Mumbai want to thank **Family Care Foundation** and its associates for sponsoring this urgent and life-saving surgery for this precious child. May God bless you for your kindness, initiative and commitment to our cause for the betterment of the physically disadvantaged.

For **Polio Child Relief-Mumbai**
